

Here is a plot of  $y = x^2$  :

```
import matplotlib.pyplot as plt
plt.rcParams['figure.figsize'] = (3, 2)
x = [1, 2, 3, 4]
y = [1, 4, 9, 16]
plt.plot(x, y);
```

The plot uses 4 data points.

Here is how to expand  $(a + b)^2$  with SymPy:

```
import sympy as sp
a, b = sp.symbols('a b')
sp.expand((a+b)**2)
```

The result is:  $a^2 + 2ab + b^2$
